

# PROBLEM

Out of 1.4 Billion population of India almost 80 to 100 million\* people (8% of total) are below poverty line. Govt. comes up with more than 10,000\* schemes for their social and economic betterment every year with a total budget of 2-3 lakh crore Rs.\* every year. But most of these people know very less about these schemes due lack of education & supportive facilities. And thus, these Schemes remain out of reach of the people themselves who they were supposed to cater.

## WHY THIS PROBLEM ?

This problem is one of the most basic problems that have persisted in our country since years and solving this problem can improve lives of many people and families living in below poverty line.

## SOLUTION

We can make a team of experts in government schemes to analyze all the schemes and have the data of what schemes are meant for whom, the through the tech team we can build a web site or an application integrating with it all the data inferences and then launching to the users. In this app users can know all the schemes they are eligible in free. Specific help by our experts if required will be given at nominal charges.

## IMPACT

This will have a huge impact on people directly or indirectly. People will become more aware about the benefits they are given by the government and how to avail them. For people living in below poverty line this problem if solved can help them to live better life,
